

ZABBIX

is a fully Open Source monitoring solution **designed to cover your full IT infrastructure stack**

Zabbix software is designed for real-time monitoring of millions of metrics collected from tens of thousands of servers, virtual machines and network devices. It is capable of adopting to legacy and new technologies easily. Zabbix is a universal enterprise-level monitoring solution. It has all the enterprise-grade features included: SSO, distributed monitoring, advanced security, no data storage limits, and much more. Zabbix integrates efficiently with CMDB, ITSM, inventory management, reporting and other types of IT systems.

Zabbix gives you the freedom

- Own your data
- Easy migrate from on-premise to cloud and vice versa
- Rely on versatility
- Choose from agent/agentless monitoring options

How does Zabbix work?

Data collection

Zabbix can collect metrics from any device, system, application or service. Everything that the Zabbix server can connect to – either via internet or internal networks, can be monitored.

Data processing

Detect problem states within your environment automatically. No need to manually analyze the incoming data flow – Zabbix can do it for you.

Data visualization

The native web interface provides multiple ways of presenting a visual overview of your IT environment: widget-based dashboards, graphs, network maps, and drill-down reports.

Notifications

Notify responsible team members about problem events using many different channels and options: send messages, emails, phone calls, let Zabbix fix issues automatically, or escalate problems according to flexible user-defined service levels. The pool of ready-to-use Zabbix integrations gives freedom in choosing the messaging platform.

Administration

You can easily configure Zabbix through the single pane of glass web UI, set up automatic back-up.

Features

Here are some highlights why Zabbix is awesome:

- Distributed monitoring
- High frequency monitoring
- Discover dynamic entities
- Plug and play templates
- Synthetic monitoring of HTTP endpoints
- Limitless data preprocessing
- Built-in integrations with leading ITSM systems
- Zabbix insights & Trigger dependencies
- Granular user roles
- SAML Single-Sign On
- Ready for IoT monitoring - support of MQTT, Modbus protocols

Services

TECHNICAL SUPPORT

As the sole developer of the tool, Zabbix company also offers a great variety of professional services. Ranging from full scale hands-on deployment or seamless migration, to live training sessions to get your whole team up to speed with the tool. Naturally there's also 24/7 tech support to make your experience with the software smoother and more enjoyable in case you require any urgent assistance.
